## *Intra-ALC Trading*

*Allow one Agency Location Code (ALC) to  
trade with itself within IPAC*

Release 18.2.3 (November 2018)

Currently, IPAC does not allow Intra-ALC trading and will reject transactions where the ALC and Partner ALC are the same. Agencies have requested Intra-ALC trading because organizations within the same ALC need to trade with each other.

### **High Level Functional Requirements:**

- All ALCs are permitted to perform Intra-ALC trading.
- No business rules are associated with Intra-ALC trading.
- The IPAC PCA Bulk File will permit Intra-ALC trading. (The Bulk File format will not change)
- The IPAC Transaction UI will permit Intra-ALC trading.

G-Invoicing allows Intra-ALC trading and IPAC will need to accept these G-Invoicing transactions in Release 18.3 (August 2019).
